

Google Sitemap Free Tools

Free tools to create your Google sitemap

The Sitemap Protocol allows you to inform search engines about URLs on your websites that are available for crawling. In its simplest form, a Sitemap that uses the Sitemap Protocol is an XML file that lists URLs for a site. By submitting a Sitemap (or Sitemaps) to a search engine, you will help that engine's crawlers to do a better job of crawling your site.

GSiteCrawler

<http://gsitecrawler.com/>

The GSiteCrawler will help you generate the best Google Sitemap file for your website. It uses different ways to find all the pages in your website and can generate all sorts of files, statistics and more.
